

Empower your team with in-depth SAST, DAST, and API testing for faster release cycles

Static Application Security Testing (SAST)

Streamline your mobile app security and ensure hassle-free compliance in just 2 clicks with automated SAST.

Automated Dynamic Application Security Testing (DAST)

Experience automated testing on real devices with DAST while running in its operational environment.

Application Programming Interface Testing (APIT)

Get automated API testing to secure critical endpoints in your applications.

Penetration Testing

Certified security experts at Appknox conduct in-depth penetration testing and discover critical vulnerabilities.

Software Bill of Material (SBOM)

Gain visibility into all the components and uncover attack surfaces for open-source and third-party components.

Store monitoring & brand abuse detection

Identify the latest mobile app version from the app stores, compare it with the latest tested version at Appknox, and get real-time notifications for unscanned and counterfeit ones to protect brand reputation.

The Appknox impact
